PROFESSIONAL SUMMARY

Software Engineer with 2+ years of hands-on experience building AI-powered applications, workflow automation and governed digital platforms. Experienced in LLM/RAG chatbots, automated operational reporting, internal audit workflows and data dashboards, and in shipping full-stack products to real users. Strong background in Python backend development, computer vision, software testing and user experience improvement.

EDUCATION

2023

Bachelor of Science in Computer Science
Jazan University – Jazan, Saudi Arabia

WORK EXPERIENCE

Nov 2024 – Present
Riyadh

Operational Contract Software Engineer | General Directorate of Prisons

- Developed **Fateen**, a secure internal LLM/RAG chatbot giving context-aware answers grounded in approved organizational knowledge.
- Built a governed reporting platform with role-based access control, approval workflows, interactive dashboards and centralized report management.
- Developed a platform that automates internal audit processes, follow-up activities and report preparation.
- Automated operational and administrative reports with Python and Power BI, including release and recidivism KPIs.
- Enhanced services and UX through requirements analysis, interface improvements, functional testing and stakeholder feedback.

Sep 2023 – Mar 2024
Tamheer Program

AI and Software Development Trainee | General Directorate of Prisons

- Developed Python applications and AI solutions to support internal business requirements.
- Built a facial-recognition attendance system that reduced employee check-in time by **60%**.
- Developed an HR chatbot that automates answers to frequent employee questions and reduces manual support workload.

PROJECTS

Hawlak · Live – Multi-store ordering platform for neighbourhood shops: customer, store, courier and admin apps, online payments, subscriptions, e-invoicing, Arabic/English.

Local Real-Time Translation – Offline speech translation across 8 languages with a text archive, running on-device (Windows, iPhone).

Facial-Recognition Attendance – Flask + OpenCV web app with employee management, attendance logs, statistics and OTP login.

Mishwar · Live pilot – Daily ride-subscription platform for students and employees: rider/driver apps, live tracking, ops dashboard (NestJS, PostgreSQL, Flutter, 145 tests).

Smart Drone Simulator – 3D Godot flight simulation controlled in real time by a FastAPI server over WebSocket.

MedicalBot – AI chatbot answering medical and health information questions.
